We've Got You Covered

Make Your Photography Matter with the Nikon Total Digital Imaging System

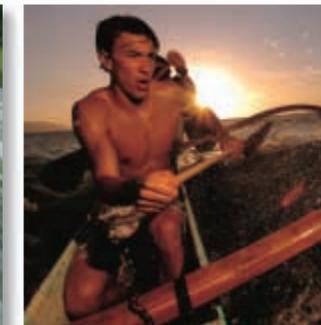

So you have a digital SLR and an idea — a GREAT idea — for a photograph. Do you have all you need to make that idea happen? A quick look through these pages and you'll know. Here you'll find all the accessories available for the Nikon D-SLR lineup: everything you need to realize your present ideas, and inspire new ones. Whether you are a seasoned professional or a passionate weekend shooter, we're sure you'll find something in this brochure that can help you craft better images. Every item found within is designed specifically for Nikon cameras, giving you seamless performance that truly brings out the best in you and your Nikon D-SLR. Got an idea? Make it happen. Here's where you start.

See what one Nikon Speedlight can do

© Gordon Nash

Gordon Nash — Wedding photographer (U.S.A.)

I shoot about 50 weddings a month, and nearly half of my images need a Nikon Speedlight. I always have one on my camera, with another ready for side-lighting or other handheld effects. Each Speedlight makes a dramatic difference to the finished image. For the above image, I used one SB-800 for side-lighting and a soft-focus filter on the lens for a dreamy look.

As a professional wedding photographer, I face moving subjects, unpredictable shooting situations and limited prep time, so speed and intuition are vital to my success. That's why I depend on the Nikon

Creative Lighting System. It's easy to use and offers so many options, along with consistent exposure and performance. I have to be ready for that special moment at all times. The Creative Lighting System helps me do that.

<http://www.gordonnash.com>

SB-800 (remote unit)
Lens: AF 85mm f/1.8D
Shutter speed: 1/125 sec.
Aperture: f/2.2
Exposure mode: Aperture-Priority Auto
Flash mode: i-TTL
Image quality: RAW

Camera and Speedlights: D200 (built-in Speedlight as commander) and

Easy, intelligent, amazing: The Nikon Creative Lighting System

Lighting is a vital component of all images, but the past complexities of flash photography have made many photographers — even seasoned ones — hesitant to explore its full potential. Not any more. Working photographers around the world are discovering how Nikon's Creative Lighting System brings simplicity and real-world usability to flash photography. The key is Nikon's breakthrough i-TTL flash control technology. With this at its core, Nikon Speedlights offer consistently accurate flash exposures that can adjust to nearly any lighting situations you face. Nikon Speedlights communicate with your Nikon D-SLR to perform all the complex lighting calculations for you. Nikon's exclusive monitor pre-flash offers precise feedback information, registering everything from available light and shadows to color temperature and reflective surfaces within the scene. The camera also integrates information from its built-in database of over 30,000 actual scenes to determine the ideal exposure — all within a millisecond before each shutter release. Whether on top of the camera or used as a wireless remote unit, Nikon's Creative Lighting System offers the most dependable and consistent flash exposure in the business.

Bright lights, big ideas – with only one Nikon Speedlight, you can:

SB-800 attached

© Joe McNally

Go the distance: more flash power

The Speedlights built into Nikon D-SLRs are smart and responsive, but sometimes your subject is far enough away that you simply need more flash power. Connect a Nikon external Speedlight and you can capture subjects at a much greater distance with more balanced illumination.

Built-in Speedlight

Bounce flash

© Gordon Nash

Soften the light: bounce flash

Direct light can be harsh and leave a distracting shadow behind your subject. Try turning the flash head toward a wall or ceiling and you'll soften the light and get rid of the shadow, creating a more flattering atmosphere for portraits.

Direct flash

Auto FP High-Speed Sync stops the action
Shutter speed: 1/3200 sec.

© Joe McNally

Capture the action: Auto FP High-Speed Sync

Indispensable to outdoor photography, this enables action-stopping shutter speeds with fill flash. It is also important to portraiture, allowing you to use larger apertures for a more pleasingly radiant ambient light. Your camera will automatically set itself to this mode if the shutter speed rises above the camera's standard flash sync speed of 1/250 second.

Normal sync

Main subject's exposure stays the same regardless of any compositional changes.

© Joe McNally

Maintain the exposure: Flash Value (FV) Lock

The FV Lock (Flash Value Lock) maintains the same flash value for correct exposure during a sequence of photographs, allowing you to zoom in on your subject, change the composition or adjust the aperture, all without altering your intended exposure. That way you can concentrate on capturing your subject without worrying about adjusting the lighting.

Original exposure

Nikon's exclusive i-TTL: a higher level of accuracy

The real breakthrough is Nikon's monitor pre-flash. It is designed to provide your Nikon D-SLR with consistently accurate feedback information in order to achieve ideal flash output. This level of accuracy is found nowhere else.

i-TTL Balanced Fill-Flash

Speedlight tips: Diffuser

Use a diffuser above the flash to soften the light and eliminate harsh shadows. This is useful in almost any flash situation, including fill flash, for natural looking skin.

Make lighting work for you with wireless multiple Speedlights

Joe McNally — Photojournalist (U.S.A.)

There have been many difficult lighting situations in my career where the Nikon Creative Lighting System literally amazed me by sorting out a proper exposure. The System offers incredibly high accuracy in most shooting scenarios. Milliseconds before each shot, the camera meter and Speedlight speak to each other, relaying and calculating massive amounts of lighting information — exposure variance, RGB, reflectance, distance and contrast, to name a few — all of which are constantly shifting and changing. I've always said that no camera system will ever solve every problem, but Nikon cameras and the Creative Lighting System do a phenomenal job of sorting through the data to give you accurate exposures. This is a major reason to use Nikon.

<http://www.joemcnally.com>

Camera setting data:
Camera and Speedlight: D2X and three SB-800s (one on-camera master/commander and two

remote units)
Lens: AF-S DX 12-24mm 1/4G IF-ED
Shutter speed: 1/160 sec.
Aperture: f/14
Exposure mode: Aperture-Priority Auto
Flash mode: i-TTL
Image quality: RAW

Speedlight tips: colored gels

Selecting the right colored gel filter is important, especially when you want the flash to appear natural alongside ambient light. For the outrigger canoe photograph (shown left), an amber gel filter added extra warmth to the main subject while blending seamlessly with the sunlight and overall color of the image.

SB-600 Speedlights can serve as remote units in wireless lighting, while SB-800 Speedlights can serve as Master, Commander or separate remote units.

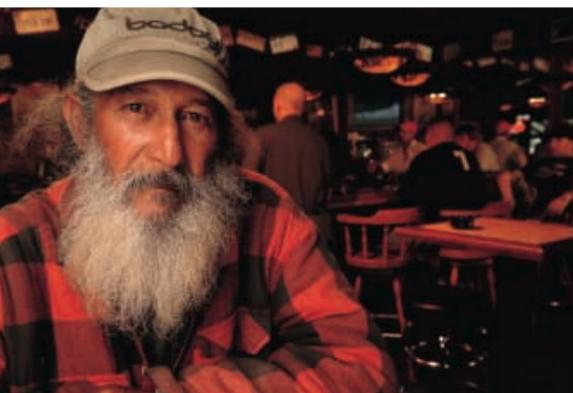

Turn good shots into great shots with Advanced Wireless Lighting

You can accomplish a lot with just one Speedlight, but sometimes an image would benefit from more artistic illumination. Adding more Speedlights not only adds depth to the scene but also character and charm to your subject. One of the greatest benefits that is singular to Nikon's Advanced Wireless Lighting is that controlling dozens of Speedlights is just as easy as controlling your on-camera Speedlight. And because it's wireless, setting up your Speedlights can be done quickly and smoothly no matter where you're shooting. From the Master Speedlight located on top of your camera, you can control the flash output of three groups of wireless remote units, adding any number of Speedlights to each of these groups.

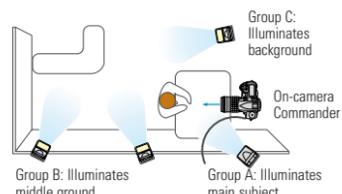

Simply set everything to Nikon's exclusive i-TTL for consistently accurate exposures in even the most difficult lighting situations. It's just as easy to explore alternate exposures by adjusting the flash exposure compensation of individual Speedlight groups. Or if you like, turn off a Speedlight group, or set everything to manual — all via the LCD panel on the Master Speedlight, all possible without ever leaving your camera. Multiple Speedlight control has never been this intuitive and fluid. No other lighting system comes close.

Group A illuminates the main subject from the side

Add Group B to emphasize the middle ground and Group C for the background

You can control up to 4 groups of Speedlights, including the Master and 3 remote i-TTL Speedlight groups, to achieve complete control of your lighting environment. All groups can be controlled from the Master Controller SB-800's LCD panel.

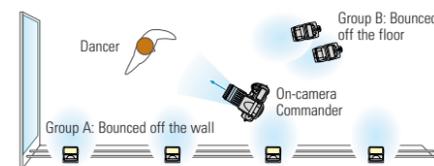

Control it all from here. Set the flash mode, turn Speedlight groups on or off and control the flash exposure compensation for up to 4 Speedlight groups from the Master Controller SB-800's LCD panel.

Timing is crucial for location shooters. Here's how one photographer captured an aspiring dancer in 24 hours, and how the Nikon Creative Lighting System provided the speed and flexibility he needed.

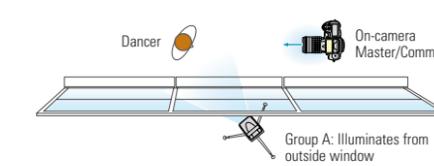

Bounce flash

The illuminated space needed to be large enough for the dancer to move freely. Four SB-800 units were attached to the ballet bar to bounce light off the wall. Two more SB-800 units bounced light off the floor. By bouncing light off the cream-colored wall and the wooden floor, the lighting achieved natural warmth.

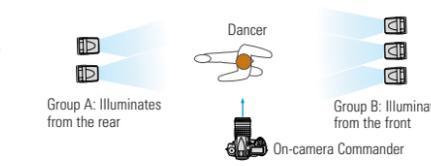

Seamless flash with mixed ambient lighting

This shop had mixed light sources: fluorescent light along with sunlight from the window. To give the scene a natural look, a diffuser is attached to an SB-800 and tilted toward the ceiling, with an additional wireless remote SB-800 illuminating the dancer from outside the window.

Directional light for a dramatic exposure

Shooting at sunset can offer beautiful ambient light, but in a narrow window of time. For a dramatic effect, two sets of SB-800 remote units illuminate the dancer from the front and the rear. After a few angle adjustments, there was a large enough volume of light to emphasize the dancer's shape appropriately.

Dramatic close-up lighting made easy

© Foto Natura team

Explore fine details with flexible, wireless control

Detail can be crucial to the impact of an image. That's why Nikon offers the ultimate tools for creative and versatile close-up lighting. Designed to work seamlessly with Nikon's i-TTL Wireless Creative Lighting System, both the R1C1 and R1 bring an amazing level of simplicity and automation to the lighting process. Close-up lighting has countless uses for nearly every kind of subject matter. Hobbyists enjoy capturing ornamental patterns found on coins, flowers and other small objects, while people photographers take advantage of the shallow depth-of-field for intimate portraits. And with no wires to get in the way, you can handhold the Speedlights to make quick adjustments or to follow moving subjects, such as insects. From medical applications to food photography, the R1C1 and R1 will make you see things differently. Both the R1C1 and R1 contain a comprehensive assortment of accessories, including the SW-11 Extreme Close-up Positioning Adapter, the SJ-R200 Color Filter Set, the SW-12 Set Diffuser, the SW-C1 Flexible Arm Clip and a set of five adapter rings to ensure the SX-1 Attachment Ring can be mounted on virtually any NIKKOR lens designed for close-range photography. Whichever set is right for you, both make mastering close-up flash photography simple, fascinating and fun.

SU-800 Wireless Speedlight Commander

Simple operation lets you easily command wireless remote Speedlight operation.

SX-1 Attachment Ring

Allows easy attachment and detachment of SB-R200 Speedlights to the lens.

SB-R200 Wireless Remote Speedlight

Flexible, dependable flash control. Can be handheld, clamped on a stand or attached to the lens using the SX-1. The lighting angle can be adjusted by tilting the flash head.

R1C1

R1C1 comes equipped with the SU-800, two SB-R200 Speedlights, and more.

Nikon Wireless Close-up Speedlight System

R1

R1 comes equipped with two SB-R200 Speedlights, and more.

Wil Meinderts, Jan Vermeer and Danny Ellinger — Nature photographers at Foto Natura team (The Netherlands)

Nikon's Wireless Close-up Speedlight System is flexible, consistent and amazingly easy to operate. You can expect superb performance straight out of the box, with their small diffusers providing beautifully soft light. Whether attached to the camera or handheld, the two SB-R200 units included are capable of a wide range of lighting situations, but add an SB-800 or additional SB-R200 units, and you seamlessly control nearly every aspect of lighting – even in poorly lit locations. The 105 mm VR Macro lens is ideal for this type of shooting, especially when insects are your subjects, but for any serious macro photographer, the R1C1 is a must-have tool.

Camera setting data:
Camera and Speedlight:

Speedlight tips: close-up lighting

The SX-1 and SB-R200 Speedlights offer exciting creative possibilities for multiple lighting.

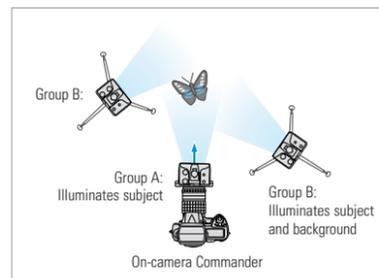

The SU-800 can also be bought separately, and features simpler operation and a wider range of options than the SB-800. And because there's no distracting pre-flash with the SU-800, some photographers prefer it when shooting people and animals.

© Foto Natura team

Brighten your subject for natural beauty

Some subjects don't pose willingly. Here a butterfly momentarily lands on a vivid orange flower. The day was overcast, so three SB-R200 Speedlights were used: one is attached to the camera and pointed directly at the butterfly. Two off-camera units have been angled for side-lighting and background fill, with diffusers softening the light for a more natural look.

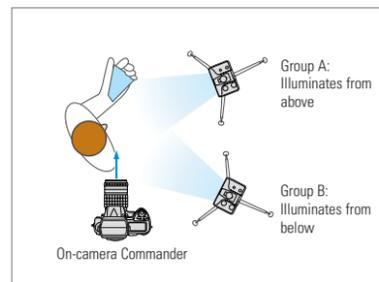

Location: Turtle Bay Resort

© Joe McNally

Close-up lighting: Step-by-step

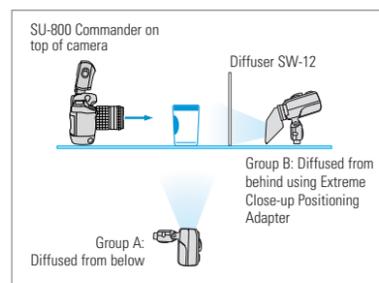

Sometimes small units make a big impact. The model holds a shard of mirror in front of her face, which is illuminated by two handheld SB-R200 remote units: one from above and one from below. After a little trial and error, the ideal angle and Speedlight positioning was determined. The result: a shot full of mystery and drama.

© Noriyuki Yuasa

Reveal depth and space from ordinary objects

To create a sense of fantasy from simple ornamental glass, one SB-R200 was placed underneath, emphasizing the thinly carved rabbit relief. To draw out the blue, a second SB-R200 was placed behind the glass and angled downwards, with the extreme close-up positioning adapter SW-11 and diffuser SW-12 helping to create the illusion of a dual-tone blue background. The result: a dreamlike image of a rabbit running across the field at night.

Which Speedlight is right for you?

Ultimate flash performance: Nikon Creative Lighting System compatible Speedlights

Powerful, Intelligent, Complete
Serves as Master, Commander or Remote Unit in Advanced Wireless Lighting

[for D3, D300, D200, D80, D60, D40]

Practical, Intelligent, Indispensable
Serves as Remote Unit in Advanced Wireless Lighting

[for D3, D300, D200, D80, D60, D40]

Compact, Intelligent, Versatile
i-TTL and Bounce Flash Capability

[for D3, D300, D200, D80, D60, D40]

SB-800 Accessories (supplied)

Bounce Adapter SW-10H
Softens the shadows and diffuses light during bounce flash by attaching the SW-10H over the flash head.

Quick Recycling Battery Pack SD-800
Shortens recycling time to as little as 2.9 seconds in Manual mode at full output by attaching an additional battery.

Colored Gel Filter Set SJ-800
Use these gels for correct color temperature in ambient lighting situations.

Speedlight Stand AS-19
(comes with SB-800 / SB-600)
The AS-19 allows stable placement when used as a remote unit. A tripod socket is also provided.

Colored Gel Filter Set SJ-1
(optional for SB-800/SB-600)

This set includes 8 types of colored gels for creative Speedlight options.
• FL-G1/G2 (for fluorescent light)
• TN-A1/A2 (for incandescent/tungsten light) • BLUE • YELLOW • RED • AMBER

Creative Lighting System Features

- i-TTL Flash
- Advanced Wireless Lighting*
- Modeling Flash*
- FV (Flash Value) Lock (D3/D300/D200/D80)
- Auto FP High-Speed Sync* (D3/D300/D200/D80)
- Wide-Area AF Assist Illuminator*
- Flash Color Information Communication
- Distance Priority Manual Flash (SB-800)

* Not available with the SB-400.

Close-up Speedlight Commander Kit R1C1 (SU-800, two SB-R200s and all the accessories)
Close-up Speedlight Remote Kit R1 (Two SB-R200s and all the accessories)

SB-R200 Wireless Remote Speedlight
Also available as a separate unit

[for D3, D300, D200, D80, D60, D40]

Two SB-R200 units are included with both the R1C1 and the R1. Each unit features a guide number of 10 (ISO 100, m) or 14 (ISO 200, m). When attached to a lens via the SX-1, the flash head can be tilted up to 60 degrees toward the optical axis of the lens or up to 45 degrees away from the lens.

SU-800 Wireless Speedlight Commander
Also available as a separate unit

[for D3, D300, D200, D80, D60, D40]

Included only with the R1C1, the SU-800 features a commander function that can trigger the SB-R200, SB-600 and SB-800 wireless remote flash units. AF-Assist Illuminator, Target Light button and Test button are provided.

Attachment Ring SX-1
Can hold SB-R200 Speedlights.

Extreme Close-up Positioning Adapter SW-11

For centering the light from the SB-R200 flash to an optical axis, which is especially effective in close-up shooting. Recommended for shooting distances within 15cm (lens to subject).

Diffuser SW-12

This milky-white panel diffuses light from a flash and softens shadows.

Flexible Arm Clip SW-C1

Allows attachment of items such as a diffuser. Can be attached to the guide groove of the Attachment Ring SX-1.

Speedlight Stand AS-20

For the stable placement of the SB-R200. A tripod socket is also provided.

Adapter Rings

Enable placing of Attachment Ring SX-1 on the front of the lens. Five filter attachment sizes (52mm, 62mm, 67mm, 72mm, 77mm) are available.

IR Panel for Built-in Flash SG-3IR

Attached to the camera's accessory shoe when the built-in Speedlight of a camera is used as a commander.

Color Filter Holder SZ-1

Enables filters to be attached to the SB-R200.

Color Filter Set SJ-R200

Change the mood of your close-up photography with four filters: Blue, Red, FL-G1 for fluorescent light and TN-A1 for incandescent light.

Flash Accessories

Expand the possibilities of your flash photography

For press photography as well as photographers more comfortable with wired flash synchronization, Nikon offers additional flash accessories. They are also indispensable for Nikon D-SLRs that lack a built-in wireless commander (such as D60, D40) for off-camera flash operation.

Sync Terminal Adapter AS-15

for D80, D60, D40

The AS-15 is compatible with the D80 and D40 which feature standard ISO-type accessory shoe but lack a sync terminal for large studio strobes.

SC-28

SC-29

TTL Remote Cord SC-28/SC-29 (1.5m)

for D3, D300, D200, D80, D60, D40

The TTL Remote Cord SC-28/SC-29 makes off-camera TTL flash control easy and assured. With the Nikon digital SLRs, the SC-29 also works as an external AF-assist illuminator.

Power Bracket Unit SK-6A* (for SB-800)

for D3, D300, D200, D80, D60, D40

Not only does the SK-6A enable you to use the camera-mountable SB-800 as a grip-type flash, it also offers you remote-flash capability. Used as an external power source or in combination with the Speedlight's own power source, the SK-6A reduces minimum recycling time by nearly half while doubling the total number of flashes available.

High-Performance Battery Pack SD-8A (for SB-800)

for D3, D300, D200, D80, D60, D40

The SD-8A is designed for use with the SB-800 to shorten flash recycling time and enhance flash capacity. It accepts six 1.5V LR6 (AA-size alkaline), 1.2V KR-AA (R6/AA-size NiCd), 1.5V FR6 (AA-size lithium) or 1.2V R6/AA-size Ni-MH batteries.

* The SK-6 may be substituted for the SK-6A in some countries.

Capture NX software: master post-production

Capture NX

© Joe McNally

Finally, software that brings out the best in everyone

Post-production will never be the same. Simple and sophisticated by design, the new Capture NX is easy, intuitive and incredibly fast, turning complicated photo editing into a few clicks of the mouse. No more number crunching. No more guesswork. Thanks to Nikon's exclusive new U Point Technology, Capture NX does all the calculations for you, making it the first truly usable editing software for all levels of photographers. Image editing has never been so comprehensive, fast and fun!

Revolutionary: U Point Technology benefits

Color Control Points:

Easy to view and reposition, this amazing new system lets you adjust the color of any part of your image in a fraction of the time that other image editing tools require. A quick adjustment to a point's slider can adjust hue, saturation, brightness and more with immediate, sophisticated results.

Black, White, Neutral Control Points:

These Control Points help correct color casts and refine color balance, adding more depth and dynamism to your images.

Show Selection for Accurate Control:

This feature turns your image into black & white, with Control Point adjustments in white so that you know immediately what is affected.

Red-Eye Reduction:

Now red-eye is a breeze to remove. Just place a Red-Eye Reduction Control Point over the eyes, click, and it's gone.

Easy-to-use Selective Tools

Take advantage of commonly used enhancement tools. In addition to familiar selections like Lasso and Marquee, the Brush tool can now paint in or paint out an enhancement.

NEF (Nikon Electronic Format)

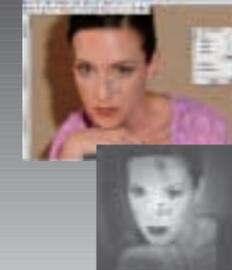

With Capture NX, you'll never have to worry about damaging your original NEF file data, even after dozens of adjustments. All your original data and a thumbnail are saved automatically, along with a set of every enhancement command applied to it. Ordinarily, any change made to a file affects the original data, but Nikon's original technology makes this simple to avoid by converting original JPEG and TIFF images conveniently into NEF files. How's that for easy?

Color Control Points

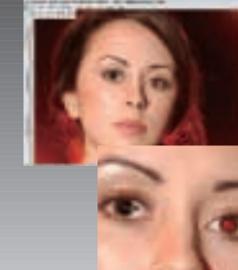

- Size
- Hue
- Saturation
- Brightness

This unique interface makes editing incredibly simple. Just drag the sliders to the left or right. No other software is this intuitive.

Show Selection

Red-Eye Reduction

Kenji Miura — commercial photographer (Japan)

Both professionals and amateurs alike now have a new world of post-production opportunities available to them. The beauty of Capture NX is its simplicity. Conventional software requires a countless series of steps, with each individual effect a new stage in the process. For many photographers, this demanded frustrating amounts of memory and patience. Capture NX makes the process easy and intuitive. Whether it's the sky or skin tone, simply point to an area you want to adjust, click, and it's done! Hours of work can now be accomplished in minutes, easily, and without requiring years of knowledge and experience.

Your file, your vision

Capture NX software: master post-production

■ Enhancing the color of the sky using Color Control Points

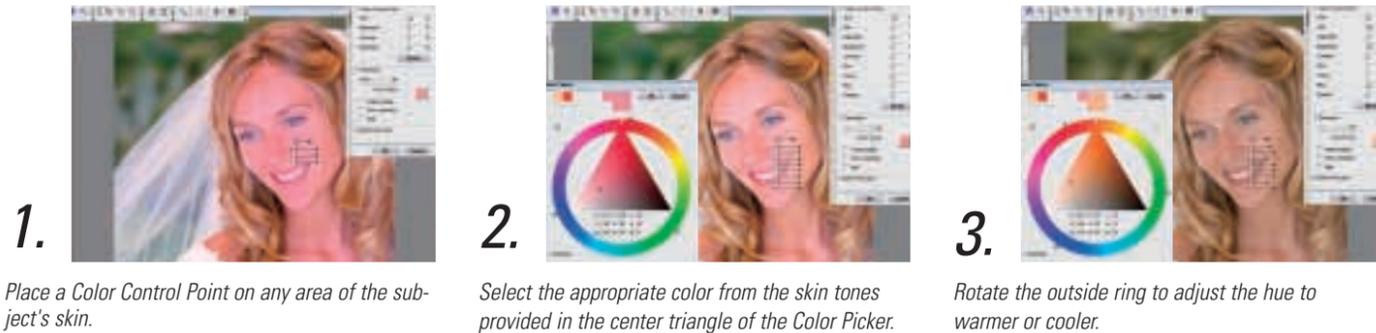

1. Place a Color Control Point on the sky.

2. Sliders for Saturation, Hue and Brightness will appear. Adjust these as you wish.

3. To repeat the effect in another area, duplicate the Control Point and place it somewhere else.

■ Correcting skin tones using the Color Picker

1. Place a Color Control Point on any area of the subject's skin.

2. Select the appropriate color from the skin tones provided in the center triangle of the Color Picker.

3. Rotate the outside ring to adjust the hue to warmer or cooler.

■ Perfecting portions of an image using Brush Tool

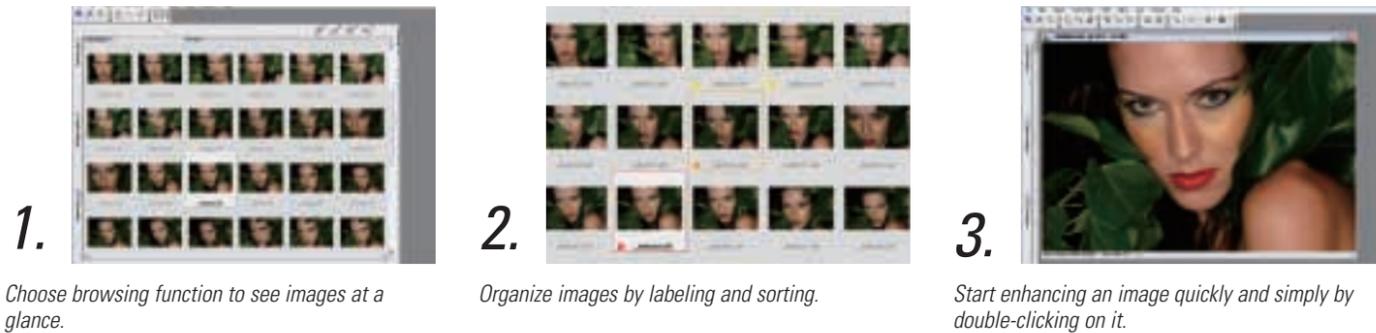

1. Choose the Brush Tool in the Selective Tools menu.

2. Paint in the area you want to enhance. Painting out the enhancement is just as easy.

3. Add any desired effects. Over 25 enhancements are available.

■ Seamless workflow from browsing to editing

1. Choose browsing function to see images at a glance.

2. Organize images by labeling and sorting.

3. Start enhancing an image quickly and simply by double-clicking on it.

Capture NX: Versatile Functions

Browser (NEW)

Completely redesigned to sort, organize, compare, tag and improve images with more speed and agility.

Batching

This simple, timesaving process automatically applies one or more enhancements to a series of images.

Edit List (NEW)

For easier, more intuitive photo editing, the Capture NX Edit List helps you to track, cancel or add new modifications.

Markers

Now it's possible to create multiple versions of your original NEF image, all within the original image file, saving you time as well as memory on your computer. Want to have a dozen versions of one image in a single file? No problem! You'll never have to search your computer to find other versions — they're all there with the original, and just a click away.

Lens Correction Tools (some functions available for RAW files only) (NEW)

Vignette Control automatically reduces the effect of marginal illumination, Color Aberration Control reduces color-fringing effects, and Distortion Control reduces pincushion and barrel distortion effects.

Color Management (NEW)

Lets you create a color profile so that colors are consistent from your first to last edit. Use the Soft Proof tool to see how a specific printer will recreate specific colors on your monitor. There's also the Capture NX print function, which lets you use an assigned profile to print your images.

Color Aberration Control

Original image

Enhanced image

Advanced Noise Reduction

16-bit image compatibility (available for RAW and 16-bit TIFF files only)

D-Lighting for pulling out more detail in both the highlights and the shadowy areas of your images.

Most features, found in Nikon Capture 4, including some not shown here, are also included in Capture NX.

Capture NX System Requirements

Windows	
CPU	1.0 GHz Pentium III or higher (2.0 GHz Pentium 4 or higher recommended)
OS	Pre-installed versions of 32-bit Windows Vista (Home Basic/Home Premium/Business/Enterprise/Ultimate), Windows XP Home Edition/Professional, Windows 2000 Professional
RAM	512MB minimum (Windows Vista), 256 MB minimum (Windows XP/2000) (1.0GB or more recommended for all OS's)
Hard Disk	200MB required for installation
Display	800 x 600 pixels (1,024 x 768 or higher recommended) with 16-bit color (High Color/ thousands of colors) or 24-bit color (True Color/millions of colors) recommended
Others	<ul style="list-style-type: none"> • CD-ROM drive required for installation • Microsoft.NET Framework required for installation • Internet connection required for some options
Macintosh	
CPU	PowerPC G4/G5, Intel Core Solo, Intel Core Duo, Intel Core 2 Duo, Intel Xeon
OS	Mac OS X (version 10.3.9 or later)
RAM	256 MB minimum (1.0 GB or more recommended)
Hard Disk	200 MB required for installation
Display	800 x 600 pixels (1,024 x 768 or higher recommended) with 16-bit color (High Color/ thousands of colors) or 24-bit color (True Color/millions of colors) recommended
Others	<ul style="list-style-type: none"> • CD-ROM drive required for installation • Internet connection required for some options

More useful software

Camera Control Pro 2

Remote control for your Nikon D-SLR

Control your Nikon digital SLRs from a distance with Camera Control Pro 2. This software can operate most D-SLR functions from a computer using a wireless transmitter that is connected via USB cable or through wired or wireless LAN. Camera Control Pro 2 is more than just direct image transfer. It also helps make the entire process – from shooting images to saving them – streamlined and manageable. Camera Control Pro 2 works well alongside Nikon's browser and other software, such as Capture NX. It's also compatible with new features found on the Nikon D3 and D300, such as Live View, the Picture Control System and the Viewer for preview and selection of images prior to transfer to a computer.

Image Authentication Software (Windows only)

Protect the integrity of your valuable data (for D3, D300, D200*)

Some photographers need to confirm that their image data has not been altered since capture. Nikon's Image Authentication Software does exactly that, verifying all the image data and information attached while protecting against any unwanted changes. Both a product key and a USB key are required, so you can be sure that the integrity of your images will remain intact. The software enables verification of JPEG, TIFF and NEF (RAW) data taken using a Nikon digital SLR compatible with the authentication function.

* Firmware upgrading is required to use this software.

Power when you need it

Battery packs and power management

Multi-Power Battery Pack MB-D10 for D300
Multi-Power Battery Pack MB-D200 for D200
Multi-Power Battery Pack MB-D80 for D80
Rechargeable Li-ion Battery EN-EL4a for D3
Rechargeable Li-ion Battery EN-EL3e for D300, D200, D80
Rechargeable Li-ion Battery EN-EL9 for D60, D40

Runs on one EN-EL4a (Battery Chamber Cover BL-3 required) or EN-EL3e, or eight AA-size alkaline/lithium/Ni-MH/nickel-manganese batteries. Features two command dials, shutter release button and AF start button for vertical shooting. Enhanced sealing system helps protect against moisture and dust.

Runs on one or two EN-EL3e Rechargeable Li-ion Batteries, or six AA-size alkaline/lithium/Ni-MH/nickel-manganese batteries. Features two command dials, shutter release button and AF start button for vertical shooting.

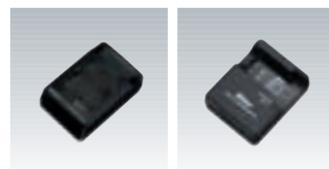

Provides extra command dials, shutter release button and AE-L/AF-L button for vertical shooting. Runs on one or two EN-EL3e rechargeable Li-ion batteries, or six AA-size batteries.

These rechargeable batteries provide extended life and consistent power, even in cold conditions. Used together with your Nikon D-SLR, the camera's fuel gauge accurately displays the remaining charge, number of shots since last charge, and current battery life status. The EN-EL4a even gives notice when calibration is necessary.

Quick Charger MH-22 for D3
Quick Charger MH-21 for D3

Enables charging of Rechargeable Li-ion Battery EN-EL4a.

Quick Charger MH-18a for D300, D200, D80
Quick Charger MH-23 for D60, D40

Enables charging of Rechargeable Li-ion Battery EN-EL3e.

Steady shots — night or day

Remote control accessories

Remote Cord MC-36 (0.85m) for D3, D300, D200
Remote Cord MC-30 (0.8m) for D3, D300, D200
Remote Cord MC-22 (1m) for D3, D300, D200
Extension Cord MC-21 (3m) for D3, D300, D200
Connecting Cord MC-23 (0.4m) for D3, D300, D200

Enables remote firing of a camera, and setting of Interval Timer and Long Time Exposure. Incorporates illuminated LCD panel.

Enables remote firing of a camera with trigger-lock function by keeping the shutter release button depressed — useful for bulb shooting.

Useful for making connections to a shutter-triggering device, such as those activated by an infrared sensor to take pictures of wildlife after dark.

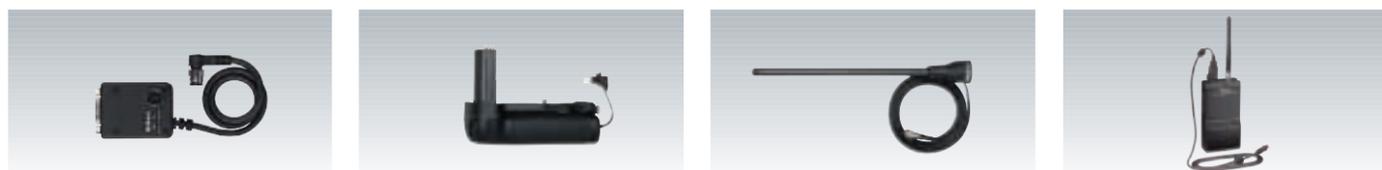

For use with MC-30 or MC-22.

Connects two cameras for simultaneous or synchronized shutter release.

Communication technology for any location

GPS cable/Wireless transmitters

GPS Cable MC-35 for D3, D300, D200
Wireless Transmitter WT-3/3A for D200
Extended Range Antenna WA-E1 for D200
Wireless Transmitter WT-4/4A for D3, D300

Enables the Nikon D3/D300/D200 digital SLRs to be connected to NMEA-0183 protocol-compatible GPS (Global Positioning System) units such as GARMIN™ and MAGELLAN™ for recording GPS positioning information and time signals synchronous to UTC (Universal Coordinated Time) within image data files during shooting.

Wireless Transmitter WT-3/3A enables image data transfer via wireless LAN (Wi-Fi)*. Simply mount one on the bottom of your camera and connect via USB cable, then any captured data can be transferred at high speed. And since they support various network and security protocols, these transmitters are compatible with a wide range of system environments. Camera Control Pro 2 also enables wireless remote control from a personal computer via PTP/IP. Data transfer through a wired LAN via Ethernet network is also possible.

* Conforming to the IEEE802.11b/g standard

Increases the effective transmission range of wireless LAN from the normal 30m to approx. 150m.

WT-4 connected with D3

The WT-4/4A supports wireless LAN conforming to IEEE 802.11b/g, IEEE 802.11a, and wired LAN conforming to IEEE 802.3u (100BASE-TX) and IEEE 802.3 (10BASE-T). Transmission range when wireless LAN is used is approx. 180m (IEEE 802.11b/g) or 260m (IEEE 802.11a). Thumbnail Select mode permits thumbnail display of images taken with up to five wirelessly connected cameras on a computer display. Images selected by confirming the thumbnail can be downloaded and saved on the computer.

Filters

Neutral Color NC Filters

These filters serve as lens protectors and do not affect color balance. Multilayer coating improves color rendition. Available in sizes 52/58/62/67/72/77mm.

Circular Polarizing Filters

These filters allow direct shooting through glass windows and minimize glare from water surfaces, sunlit trees and grass. Compatible with both color and monochrome photography. Available in sizes 52/58/62/67/72/77mm.

Gelatin Filter Holders AF-3, AF-4

These holders accommodate gelatin or glass filters to a thickness of approx. 2mm. The AF-3 is used with 3-inch square gelatin filters and Nikkor lenses having an attachment size of 52/62/67/72/77mm. The AF-4 is used with 4-inch square gelatin filters and NIKKOR lenses having an attachment size of 52/62/67/72/77/82/95mm.

Nikon also offers two dedicated hood options — the HN-36 for the AF-3 and the HN-37 for the AF-4. Several hoods of the same diameter can be stacked, depending on the focal length of the lens in use.

Slip-in Circular Polarizing Filters

Designed for use with telephoto lenses that provide a slip-in filter holder, these filters reduce glare from non-metallic surfaces such as glass and water. Simply turn the rotating ring on the holder to find the most effective position. These filters do not affect autofocus or auto exposure operation. Both the C-PL1L and C-PL3L feature 52mm diameter.

FotoNation® Note: The WT-3/4 is sold in countries where governments approve the use of 13 frequency channels. The WT-3A/4A is sold in countries that authorize only the use of 11 frequency channels.

View with clarity and comfort

Viewing attachments

Right-Angle Viewing Attachment DR-5/DR-6

for D3, D300, D200, D80, D60, D40

Provides an upright, unreversed image for right-angle viewing. Individual eyesight adjustments are possible. The DR-5/DR-6 allows you to set the reproduction ratio to either 1:1 or 1:2.

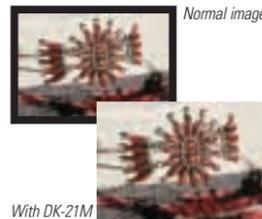

The DR-5 is for cameras with a circular eyepiece (D3); the DR-6 is for cameras with a rectangular eyepiece (D300, D200, D80, D60, D40).

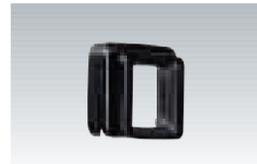

Magnifying Eyepiece DK-21M

for D300, D200, D80

The DK-21M magnifies the finder image by approximately 1.1 times.

With DK-21M

Eyepiece Correction Lenses DK-20C

for D300, D200, D80, D60, D40

An easy-to-use viewing and focusing aid which enables near- and farsighted photographers to view the finder image accurately without having to wear eyeglasses.

Eyepiece Magnifier DG-2

for D3, D300, D200, D80, D60, D40

The DG-2 provides 2x magnification of the central area of the finder image. Eyesight adjustment provided. Useful for critical focusing in close-up photography. Requires an eyepiece adapter.

Eyepiece Adapter DK-22 DK-18

for D300, D200, D80, D60, D40

Enables attachment of Eyepiece Magnifier DG-2 to the camera's eyepiece. DK-22 is for cameras with a rectangular eyepiece. DK-18 is for cameras with a circular eyepiece.

Magnifying Eyepiece DK-17M

for D3

Attached to the D3, the DK-17M magnifies the finder image approximately 1.2 times. Diopter adjustment range is widened at both the (+) and (-) sides.

Eyepiece Correction Lenses DK-17C

for D3

Five correction lenses from -3 to +2m⁻¹ for circular-eyepiece cameras.

Antifog Finder Eyepiece DK-17A

for D3

A transparent plastic plate with a special surface coating that reduces fogging.

Rubber Eyecup DK-19

for D3

Improves viewing comfort and prevents stray light from entering the viewfinder and washing out contrast.

Close in on every subject

Close-up accessories

(For information on the PB-6 and its limitations, see chart below)

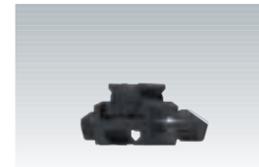

Bellows Focusing Attachment PB-6

Renders reproduction ratios from about 1:1 to nearly 11x life-size, depending on the lens in use and whether the lens is mounted in normal or reverse position. Focal range of compatible lenses is from 20mm to 200mm. The lens extension covers the range from 48mm to 208mm, for producing frame-filling images of even the tiniest subjects.

Extension Bellows PB-6E

Attaches to the PB-6 for an astounding magnification of 23x life-size when using a 20mm wideangle lens in reverse position. With this combination, the continuously variable extension range is from 83mm to 438mm.

Bellows Spacer PB-6D

Enables a D2 series camera to move on the PB-6 rail without interference and allows horizontal/vertical changeover anywhere along the rail. Two PB-6Ds are needed when using the PB-6; three are needed when using the PB-6E.

Slide Copying Adapter PS-6

Used with the PB-6 and a Nikkor lens to make duplicate slides. Cropping of the original slide is possible.

Macro Copy Stand PB-6M

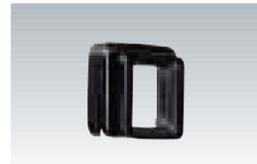

Attaches to the end of the PB-6 to convert it into a miniature copy stand or specimen stage.

Magnifying Eyepiece DK-21M

for D300, D200, D80

The DK-21M magnifies the finder image by approximately 1.1 times.

Eyepiece Correction Lenses DK-20C

for D300, D200, D80, D60, D40

An easy-to-use viewing and focusing aid which enables near- and farsighted photographers to view the finder image accurately without having to wear eyeglasses.

Eyepiece Correction Lenses DK-17C

for D3

Five correction lenses from -3 to +2m⁻¹ for circular-eyepiece cameras.

Antifog Finder Eyepiece DK-17A

for D3

A transparent plastic plate with a special surface coating that reduces fogging.

Rubber Eyecup DK-19

for D3

Improves viewing comfort and prevents stray light from entering the viewfinder and washing out contrast.

Macro Adapter Ring BR-2A

Enables reverse-mounting of lenses. The BR-2A also increases the working distance for normal or wideangle lenses. Compatible with lenses having a 52mm-sized front attachment.

Adapter Ring BR-3

A handy adapter that converts the bayonet mount of reverse-mounted lenses to the 52mm thread used for filters and hoods.

Focusing Stage PG-2

Simplifies close-up focusing when using a tripod-mounted camera. (For D200, D80, D60, D40)

Auto Extension Rings *

PK-11A**, PK-12 and PK-13 auto extension rings fit between the camera body and lens singly or in combinations. When attached to an AI Nikkor lens, the lens retains automatic diaphragm and meter coupling functions. This gives you freedom to compose, focus and meter at the brightest, fullest aperture position without having to stop down the lens manually before shooting. (Exposure meter does not work with D80, D60, D40.)

* G-type lenses cannot be used.
** Cannot be used with AF-S lenses.

PB-6 Compatibility Chart
Depending on the camera used, certain accessories may be required when using the PB-6. Auto Extension Rings can increase lens extension.

D3	PK-12 or PK-13; two PB-6Ds (depending on camera position)
D200	PK-12 or PK-13
D200 with MB-D200	PK-13 and two PB-6Ds

Reproduction ratio

The reproduction ratio, which indicates the relationship between subject size and the size of the image on an image sensor, is determined by the distance to the subject and by the lens' focal length setting. If

Reproduction ratios using 50mm lens

1/8X

1/4X

1/2X

1X

2X

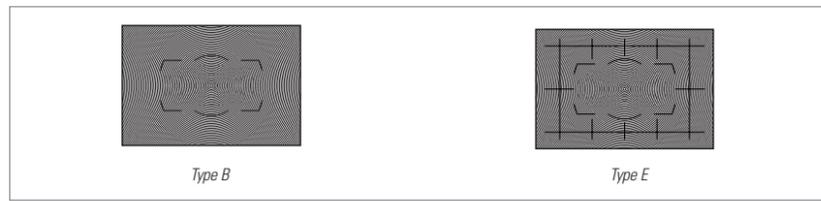

4X

8X

the reproduced image is the same size as the subject, the reproduction ratio is one-to-one (1:1 or 1x). If the image is two times larger, the ratio is 2:1 or 2x. Nikon equipment for close-up photography offers a wide range of reproduction ratio capabilities.

Interchangeable Focusing Screens

Type B

for D3

Offers unobstructed viewing and easy focusing over the entire matte surface. Good for all general photography.

Type E

for D3

Features grid patterns ideal for copying and architectural photography.

NIKON DIGITAL SLRs

You want performance. You need consistency. You're searching for the best image quality in the business. You're looking in the right place. Professionals and passionate amateurs around the world understand that Nikon means quality and dependability. Which digital SLR is right for you?

D3 The ultimate in Nikon FX-format performance

- FX-format CMOS image sensor with 12.1 effective megapixels
- Nikon's original EXPEED digital image processing concept incorporated
- Sensitivity range ISO 200 to 6,400; can be set to ISO-equivalent 25,600
- Scene Recognition System improves accuracy of autofocus, auto exposure and auto white balance
- 51-point autofocus system with 15 cross-type sensors
- Continuous shooting at approx. 9 fps (FX format/5:4) or 11 fps (DX format)
- 3-inch, 920,000-dot (VGA) LCD monitor
- Quick startup and short 37-millisecond shutter release time lag

The ultimate in Nikon DX-format performance D300

- DX-format CMOS image sensor with 12.3 effective megapixels
- Nikon's original EXPEED digital image processing concept incorporated
- Sensitivity range ISO 200 to 3,200; can be set to ISO-equivalent 6,400
- Scene Recognition System improves accuracy of autofocus, auto exposure and auto white balance
- 51-point autofocus system with 15 cross-type sensors
- Continuous shooting at approx. 8 fps for up to 100 consecutive RAW (NEF)
- 3-inch, 920,000-dot (VGA) LCD monitor
- Quick startup and short 45-millisecond shutter release time lag

D200 Precision crafted, for the ultimate digital SLR experience

- 10.2 effective megapixels for 3,872 x 2,592 pixel images
- Exclusive Nikon DX-format CCD imaging sensor and high-speed 4-channel independent data output
- Continuous shooting at 5 fps up to 37 consecutive JPEG or 22 RAW (NEF)*
- 3D Color Matrix Metering II featuring 1,005-pixel RGB sensor
- High-performance System LSI
- High-speed, high-precision 11-area AF system
- Built-in Speedlight supports Creative Lighting System

* When using a SanDisk SDCFX3 (Extreme III), SDCFH (Ultra II) or Lexar Media 80X WA CompactFlash™ card

High performance that satisfies all shooting styles D80

- 10.2 effective megapixels for 3,872 x 2,592 pixel images
- Exclusive Nikon DX-format CCD imaging sensor and high resolution image processing engine
- 3D Color Matrix Metering II featuring 420 segment RGB sensor
- Seven automated Digital Vari-Program modes
- Broad ISO-equivalent sensitivity range (100-1,600)
- High-performance i-TTL built-in flash and Creative Lighting System compatibility

D60 Stunning photography is just a step away

- 10.2 effective megapixels for 3,872 x 2,592 pixel images
- Nikon's original EXPEED digital image processing concept incorporated
- Intuitive and ergonomically designed control
- Innovative dust-reduction system including Airflow Control System and Image Sensor Cleaning
- 3D Color Matrix Metering II featuring 420-segment RGB sensor
- Eight automated Digital Vari-Program modes
- A wide variety of in-camera Retouch Menus
- Built-in flash with i-TTL flash control

Outstanding picture quality that's easy for everyone D40

- 6.1 effective megapixels; Nikon DX-format CCD
- Advanced digital image processor
- 3D Color Matrix Metering II featuring 420-segment RGB sensor
- Intuitive and ergonomically designed control
- Eight automated Digital Vari-Programs, including Auto (Flash Off) mode
- Advanced AF system with refined algorithms
- "Assist Images" to help select appropriate settings for many camera features
- Built-in Flash with i-TTL flash control
